

ABSTRACT

~~The main object of the present invention is to provide a~~ A pattern forming body is provided or a color filter, wherein ~~[[a]]the~~ color filter can be manufactured efficiently by a simple process~~[[,]]without any and also, no~~ cracks and no influence to an alignment of a liquid crystal. ~~The present invention achieves the above mentioned object by providing~~ aA pattern forming body is provided comprising: a base material; a photocatalyst containing layer, comprising at least a photocatalyst, formed on the base material; a protecting part formed on the photocatalyst containing layer; a property variable layer, whose surface property is varied by a function of a photocatalyst due to an energy irradiation, formed so as to cover the photocatalyst containing layer and the protecting part; and a property-varied pattern which is a property varied property variable layer.
